

US 29796 v2a

Assessment Sample Answers

GENERIC COMPUTING

Unit Standard 29796

Version 2 | Level 3 | Credit 7

Collaborate and communicate with others effectively and safely in a digital environment

Important Note for Assessors:

1. These sample answers and/or assessor's comments are supplied for the use of assessors and moderators only.
2. A copy of this **Assessment Sample Answers** document and any other assessment evidence must be submitted with the **Assessment Booklet** when moderation is called for.
3. Sample answers are indicative only and candidate's answers may differ from the sample answers provided they meet the requirements of the tasks. The candidate's responses should be reasonably comprehensive as judged by the Assessor for level 3.

Level 3 Descriptor

KNOWLEDGE

Some operational and theoretical knowledge in a field of work or study.

SKILLS

Select and apply from a range of known solutions to familiar problems.

Apply a range of standard processes related to the field of work or study.

APPLICATION

[OF KNOWLEDGE AND SKILLS]

Limited supervision.

Requiring major responsibility for own learning and performance.

Adapting own behaviour when interacting with others.

Contributing to group performance.

Important information for assessors

No specific sample answers are provided for this assessment as each candidates' assessment evidence will differ. However, the following are guidelines for assessors.

1. You may **assist** learners to identify suitable evidence for this unit standard. However, the candidates themselves must take the main responsibility for identifying suitable evidence. For example:
   - A learner could identify what they believe to be suitable evidence and then check with the assessor to ensure it is suitable. The assessor may indicate any areas where the evidence is insufficient or inappropriate.
   - You could give the learner some suggestions for the type of evidence they could produce. For example:

     Learner: *I'm not sure how to show evidence of a conferencing tool. I plan to use Zoom for a Zoom meeting, but I'm not sure what sort of evidence I should submit for the assessment.*

     Assessor: *You could make a recording of the Zoom meeting OR allow me (the assessor) to observe as you when you hold your Zoom meeting.*

     The learner would then be expected to investigate for themselves suitable ways to record a Zoom call, or arrange with the rest of the group to allow the assessor to observe the Zoom meeting.
2. You may ask learners for clarification/explanation about any evidence submitted. For example, you may ask for more information about the context of the communication, etc. For the purposes of moderation, any such clarification should be included in the evidence submitted. For example, you could ask for clarification in writing, make a recording of a verbal discussion you have with the candidate, or include notes from a verbal discussion you have the candidate.
3. For Part 2, risks will depend on the types of tools the learner chooses to use. Examples may include unauthorised access to the learner's account due to hacking or their password being compromised; cyber-bullying; spam; phishing and cyber stalking. Learners may mitigate these risks by having a secure password, with anti-malware and firewalls on their devices and networks, not clicking on suspicious or unknown links, and reporting any unacceptable behaviour immediately.
3. Guidance for assessment of PC 1.2 (Examples of what to look for):
   - **Respect:**
     - Is the language learners use when communicating with one another and other people outside the group/team (eg stakeholders) respectful? [This overlaps with 'language used' requirement.]
     - Are they respectful in terms of the form of communication they choose, and when they choose to communicate? For example, it would not be considered respectful to video call a stakeholder outside of normal work hours.

Continued on next page...

- **Timeliness:**
  - Do learners respond to one another in a timely manner? For example, if one learner messages another asking for information, do they respond in a timely manner? If a learner is asked by another team member to give their input on a particular issue by a certain time/date, do they do so?
- **Discretion**
  - Have learners shared any information they should not? This could include gossip about other team members, information about what other teams are working on, etc. [This overlaps with the 'confidentiality' requirement – below.]
  - Have learners ensured they have not used any indiscrete language, images, behaviour etc – in other words, anything that may cause offence to the person(s) they are communicating with? [This overlaps with the 'language used' requirement.]
- **Confidentially**
  - Have learners ensured that they have not wittingly or unwittingly shared confidential information about the project, team members or stakeholders with any unauthorised person? This includes taking appropriate measures to ensure their devices and data cannot be accessed by any unauthorised person – eg passwords, anti-malware protection, etc.
- **Language used**
  - Have learners used language that is appropriate to the purpose, target audience, context, and type of digital tool used? For example, abbreviations, 'text speak', and emoticons may be appropriate in a short communication between team members via chat. However, it would not be appropriate in a communication between a learner and a stakeholder.
  - In all cases, language should be respectful, discrete and considerate of others (including cultural and other differences).
- **Commitment**
  - Does the learner's communication with others demonstrate their commitment to those they are collaborating with, the project they are working on, and the person(s) for whom they are completing the project outcome (ie key stakeholders)? Commitment might be demonstrated in a number of ways including:
    - responding in a timely, respectful and polite manner to others
    - depth of ideas, information and opinions contributed, etc.
- **Cultural appropriateness**
  - Does the learner show respect for the culture of others. For example, are they respectful if a team member wishes to start an online meeting with a karakia?

The requirements related to etiquette for online use should be covered by the examples listed above, as they overlap.

Continued on next page...

4. Evidence contributing to the standard can be gathered over time and from a range of scenarios. It does not all have to relate to a single collaborative event the candidate participates in.
5. If it is not possible or practical for the candidate to gather evidence from real, actual collaborative events, you can provide a scenario(s) that will provide the opportunity for candidates to produce the necessary evidence. An example of such a scenario is provided in the Appendix to this document.

Appendix: Sample Scenario for Assessment

Important notes for assessors

To follow is an **example** of the type of scenario that could be used for this assessment. You will need to make the following adaptations to the scenario.

- The number of members in the group.
- The specific project or task to be completed by the group. In order for learners to meet the requirements of PC 1.4 you will need to ensure that the project/ task to be completed will require learners to send each other image files (and/or documents containing images).
- The date by which the project/task must be completed.
- The specific organisational procedures and requirements that apply to digital communications in the specific organisation in which this assessment will be completed. The scenario provided gives an example of suitable organisational procedures and requirements.
- In order to meet the requirements of Guidance information 2, you **must** ensure that the scenario, and any organisational procedures and requirements you provide, are appropriate for the specific context the learner is in (ie workplace setting, educational setting, etc).

Continued on next page...

1. Get learners to work in groups/teams of 3 or 4.
2. Give learners a group project/task to work on. This could be a group project that they need to complete for a different subject (that they are all doing), or it could be related to the Computing curriculum. Below is an example. You could substitute the 'topic' of bullying with any topic you believe is suitable and appropriate for your learners.

Example scenario
Tell the team that they need to provide information for students and parents about **bullying** and how to do deal with it.

In the brief you provide learners, make sure you indicate at least the following.

- The **purpose** – to provide information about bullying and how to deal with it.
- The **intended audience** – eg the age range of the students who will be given the information (pre-school, primary, intermediate, secondary, etc)
- **Specific requirements** against which the success (or otherwise) of the project can be assessed. This would include the following.
  - The **format** the information needs to be provided in. For example, you could tell learners that they need to produce a flyer for children, as well as an information sheet and PowerPoint presentation for parents. Alternatively, you could say they need to create a website, with each learner responsible for one page of the website; or a video that highlights what bullying is and how to deal with it; or any combination of the aforementioned.
  - That **images** need to be included in the flyers, information sheets, etc. [**This must be included as it is a requirement for PC 1.4.**]
  - The **form** the final items need to be provided in – eg pdf or hard copy for the documents, etc.
  - The **date** by which the project needs to be completed.
  - **Any other information** needed to ensure the project is manageable and realistic for learners in their specific context, and to allow you to make a judgement as to the success of their use of digital tools to collaborate on the project.

3. Learners do NOT necessarily need to produce the final outcome required by the project. In other words, for the example project above, they do not necessarily need to actually produce the flyers, information sheets, presentations, videos, etc. Instead, they need to collaborate with each other to do the planning and preparation for the creation of the project outcome. This could include the following.
   - **Planning** meetings, discussions and other communications. To provide evidence of selection and use of collaboration tools (PC 1.3) you could instruct them to do the following.
     - Hold at least one of their planning meetings using a **conferencing tool** (eg Zoom).
     - To keep all records of their use of collaboration tools to:
       - arrange the planning meetings

Continued on next page...

- provide each other with information needed to prepare for the meeting
- to do follow up on a meeting that has already taken place (eg a meeting 'agenda', notes from previous meetings, etc).

This could be done using a wide range of collaboration tools including:

-- **coordination** tools (eg calendars, project management/planning tools)

- **online learning** tool (eg using a chat or forum feature in the program) and/or
- **social networking** app.

- **Initial conceptual designs** for the outcomes. This could include, for example, digitally sharing ideas with each other for the text content and images to be included in the outcomes.

  Communications related to initial conceptual designs could involve use of a wide range of collaboration tools such as:

  - **connectivity** app (eg screen sharing)
  - **online learning** tool (eg dedicated forum)
  - **social networking** app (video/photo sharing)
  - **document collaboration** tool (eg Google Docs), etc.

IMPORTANT: Emphasise to learners that they need to use a wide range of different tools when collaborating. To ensure they meet the requirements for PC 1.3 they must use **all** of the following collaboration tools.

- Document collaboration tool
- Coordination tool
- Connectivity app
- Conferencing tool
- Online learning tool
- Social networking app

It is also crucial to remind learners to keep evidence (records) of all communications when they communicate.

- **Formal and informal communication:** You (the assessor), may play the role of key stakeholder for this project. Alternatively, you could provide learners with a fictional stakeholder(s) they are required to communicate with. Each learner should be required to communicate with the key stakeholder regarding the project progress, planning for the project, initial conceptual designs, and so on. This will provide the opportunity to gather evidence of the learner's ability to communicate more formally that they would with the other members of the team (ie PC 1.4, GI 3).

4. **Other requirements**:

- Make it clear that learners must keep the information they share with other members of the team **confidential** (so that other teams don't use their ideas).
- Provide learners with the **organisational procedures and requirements** for your organisation (eg 'Code of conduct for use of digital devices' or similar).
