Nau Mai, Haere Mai

Welcome to your Learner's Guide for Unit Standard 29796.

In this course, you will learn how to collaborate effectively with others in a digital environment.

When you have successfully completed this course, you will be able to do the following in a digital environment:

- Select and effectively use collaboration tools within a digital environment, according to the requirements of a given purpose.
- Use effective communication practices and etiquette for online use when collaborating with others.
- Communicate using recognised conventions for the purpose, target audience, context, and digital environment.

A glossary has been included at the end of this guide to help you understand new terms and other words that may be difficult. Words that are in the glossary have been highlighted the first time they appear in the text.

LESSON 1:

Collaboration tools (Part 1)

Learning Objectives

When you have finished this lesson, you will be familiar with the following:

- different types of tools that can be used to collaborate in a digital environment.
- a range of digital tools used for coordination, conferencing and connectivity.

A space has been left on the right of every page for you to make notes about what you are learning.

Collaborating in a digital environment

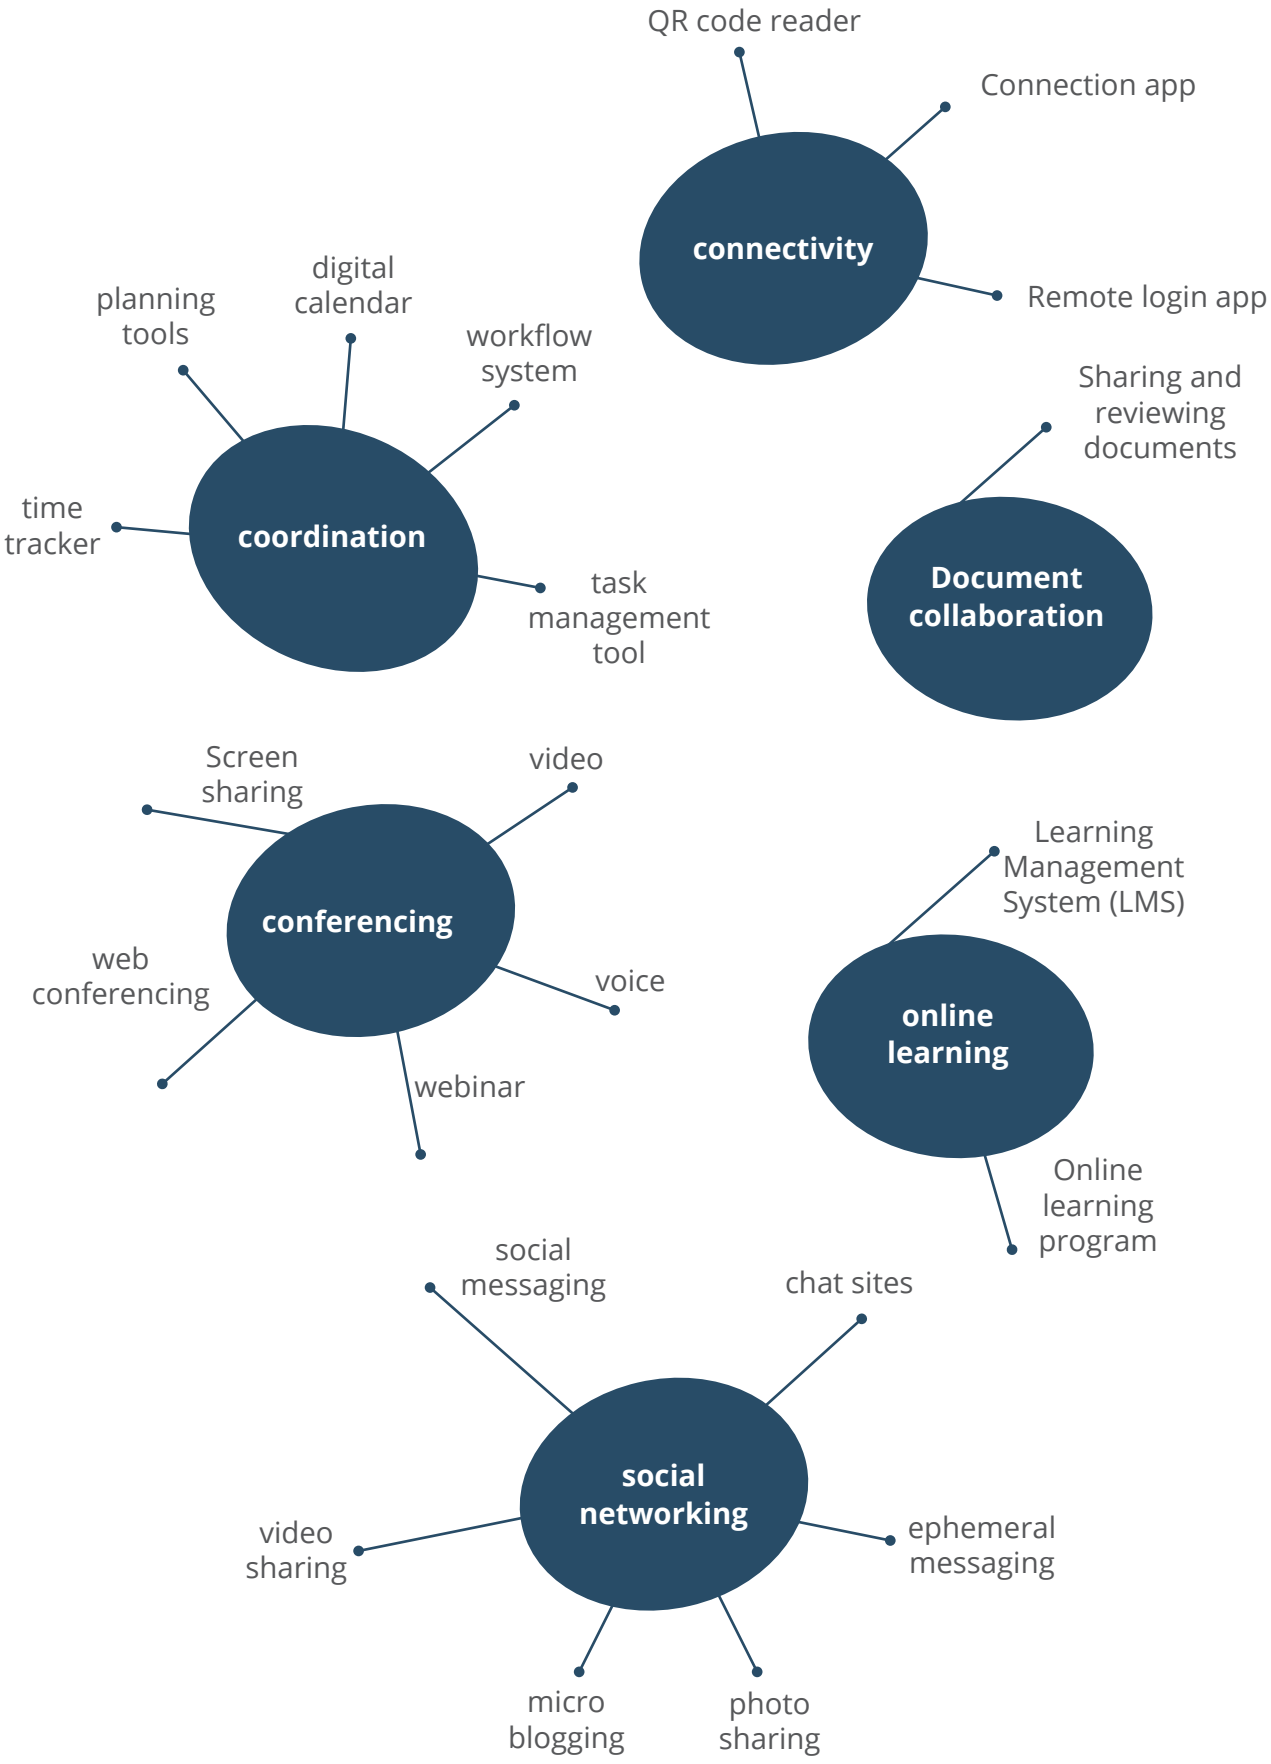

In the past, if people wanted to collaborate on a project or task they would need to meet face-to-face. However, new technologies mean that people who are in a different building, city, or even country can communicate and work together effectively.

Collaborate	Work with other people on an activity or project.

In this lesson, we look at a range of digital tools that can be used to collaborate in a digital environment. This includes the following:

Continued on next page...

12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

QR code reader
Connection app
connectivity
Remote login app
digital calendar
planning tools
workflow system
time tracker
coordination
task management tool
Sharing and reviewing documents
Document collaboration
Screen sharing
video
conferencing
web conferencing
voice
webinar
Learning Management System (LMS)
online learning
Online learning program
social messaging
chat sites
social networking
video sharing
ephemeral messaging
micro blogging
photo sharing

Keep in mind that these are broad categories and that many types of digital tools belong to more than one category. For example, email can be used for coordination and communication; forums can be used for communication and online/e-learning; and so on.

In this lesson, we begin by looking at a range of different **coordination** and **conferencing** tools that can be used for collaboration in a digital environment.

IMPORTANT NOTES

Try using the digital collaboration tools yourself

In the sections that follow, you will be given descriptions and examples of different types of digital collaboration tools. Investigate two examples of each collaboration tool type that you have **not** used before.

- Try out the tools for yourself to find out more about how they work.
- If you need help using a particular tool, look for the Help function of the tool, or do an Internet search to get help.

Coordination tools

Digital coordination tools help coordinate resources, tasks and the people involved to achieve an objective.

Coordinate	Arrange and organise all elements needed to achieve a goal or objective in an effective way. These elements could be the people working towards the goal, the tasks that need to be accomplished to achieve the goal, the resources needed, and so on.

You can use digital co-ordination tools to:

- manage group activities
- plan your tasks
- track the time spent on tasks

In this section we will look at different types of coordination tools.

2a © Instant Education Solutions Ltd www.instant.org.nz

Workflow Management Systems (WfMS)

Workflow	An organised sequence of tasks and processes to create a product, provide a service, and/or to process information.

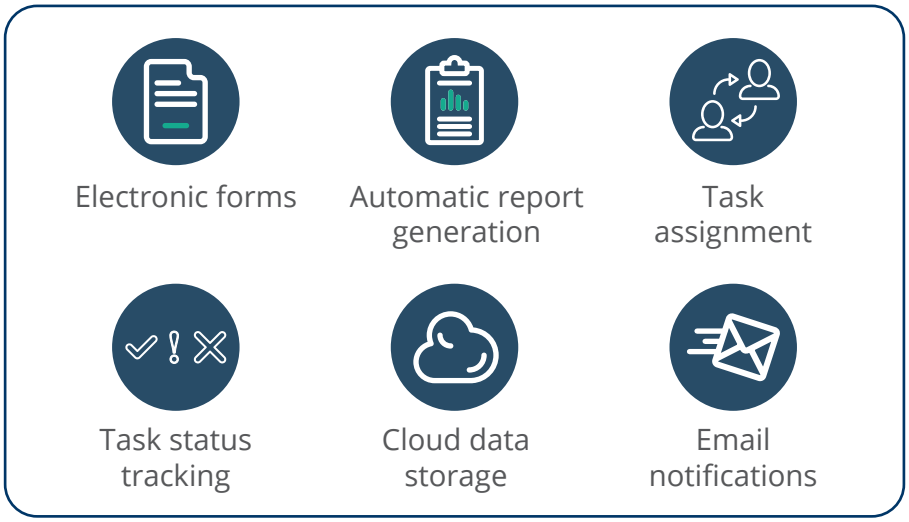

A workflow management system (WfMS) helps to automate the different processes involved from the beginning to the end of a work task. Let's look at the workflow for an on-line grocery order.

Example of a workflow

The diagram below shows an example of a workflow applied to producing a product for a client.

WfMS can have a range of features, depending on the context in which it is being used. For example, some of the features could include the following:

DIGITAL TOOLS - EXAMPLES

Workflow Management Systems

Below is a list of some commonly used WfMSs. Visit their websites to find out more about each system.

- Kissflow: https://kissflow.com/#home
- WorkflowMax (by Xero): https://www.workflowmax.com
- Wrike: https://www.wrike.com/

Calendaring software

Digital calendars allow you to set and keep track of appointments, meetings, and tasks.

To follow are some of the main features that most calendaring applications include.

Meetings: You can set up meetings and email an invitation to the attendees.

Continued on next page...

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Cloud-based calendar: You can access your calendar from any device with an internet connection.

Reminders: To remind yourself, and anyone else the appointment is shared with, of upcoming meetings or appointments.

Availability checking: Check whether a person is available at a certain time, or if a room is available for a meeting.

Calendar sharing: Allows members of a team to see each other's calendars to make it easier to arrange meeting times, etc.

Attachments: Add files to events, eg the agenda for a meeting. This allows everyone involved to easily view relevant documentation.

Task manager: You can add and manage tasks eg set reminders for task completion.

DIGITAL TOOLS - EXAMPLES

Calendaring Software

Below is a list of some commonly used calendaring software. Visit the websites to find out more about each app.

- **Google Calendar:** https://apps.google.com/intx/en_nz/products/calendar/
- **Microsoft Outlook – Calendar tool:** built in to Windows
- **Apple's Calendar app** (comes with the OS): https://apps.apple.com/us/app/calendar/id1108185179

Time trackers

If you have projects where time is factored into the cost, a time tracker can help you record how much time you have spent on it. It is also helpful for organising your time - you can make sure you spend the most time on the more important activities, and can also help you identify areas where time is wasted!

A time tracker works like a stop watch - it records the time at the start and keeps recording the time until you end it.

Some time trackers also include the following features.

Reminders: Pop-up reminders to start tracking your time.

Cloud syncing: Time entries are synced to the cloud in real time. This allows you to access your time tracking from different devices.

Time tracking for teams: Keeps track of the time all team members spend on a particular project.

DIGITAL TOOLS - EXAMPLES

Time trackers

- **Toggl:** https://toggl.com
- **Time** (by WorkMax): http://workmax.com/workmax-resource-management-solutions/employee-time-tracking
- **WorkflowMax** (by Xero): https://www.workflowmax.com/integrated-project-management/time-tracking
- **Time Doctor:** https://www.timedoctor.com/

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Planning and task management tools

These tools are discussed together as many perform both functions. Planning involves

- planning the required resources for the task (eg people, tools, money)
- creating an action plan so everyone knows what needs to be done and when

Task management involves:

- setting and assigning tasks
- tracking their progress and completion

These tools have a variety of features, depending on their type. Below are some examples:

- **Tools for generating ideas:** This could include features which allow you to brainstorm, create mind maps and generate ideas as a team.
- **Tools for planning and tracking tasks in a project:** Examples include Gantt charts, flowcharts and spreadsheets. They may also calculate the cost.

Many project management and collaboration apps include a range of the above features.

DIGITAL TOOLS - EXAMPLES

Planning and task management tools

- **Microsoft Office Project:** https://products.office.com/en-nz/project
- **Asana:** https://asana.com/product
- **Trello:** https://trello.com/tour
- **Xmind:** http://www.xmind.net
- **Wisemapping:** http://www.wisemapping.com/
- **Lucidchart:** https://www.lucidchart.com/

Conferencing tools

Conferencing tools allow people to communicate directly with each other without needing to be in the same room.

Conferencing	A formal discussion between people.

Video conferencing

Video conferencing is useful when people work or live in different areas and are not able to meet in person. It allows them to see and hear each other. Video conferencing may be used in business for meetings, reducing the cost of travelling, and enabling people working remotely to communicate with others.

Video conferencing requires a computer, camera and an internet connection. It is useful when there is a group of people in each location eg two rooms, each with several people who want to conference. Where each person is connecting individually, the organisation may set up a web conference, as described below.

Web conferencing

Video conferencing may use specialised equipment, especially if there are groups of people at each location. However most video conferencing uses a web-based app. You may have used one of these to connect with friends or family . Web conferencing tools include a number of additional features such as:

Screen share: You can display what is on your screen so others can see what you are looking at.

Chats: You can send text messages during the call - if you want to add something to the conversation and don't want to interrupt, or add a link to the document being discussed etc.

Leave a message: Some web conferencing apps allow you to leave a voice or video message.

Continued on next page...

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

DIGITAL TOOLS - EXAMPLES

Web conferencing tools

- **Google Meet:** https://meet.google.com/landing
- **Zoom:** https://zoom.us/
- **Adobe Connect:** http://www.adobe.com/products/adobeconnect.html
- **Microsoft Teams** https://teams.microsoft.com

Telephone conferencing

Telephone conferencing has the same uses as video conferencing, except that it only allows for audio communications. In other words, people can hear each other, but they cannot see each other.

Many mobile phones allow you to make conference calls without needing to download any additional software (apps).

Organisations may use specialised equipment to initiate a conference call over the telephone network, or they may use a web app with the video turned off.

DIGITAL TOOLS - EXAMPLES

Voice conferencing tools

- **Smartphones** such as iPhone and Samsung Android phones have voice conferencing features built into their standard software.
- **Zoom, Adobe Connect, Teams** and **Google Meet** can be used without video (ie audio only), as voice conferencing tools.

Activity

Investigate how to make a conference call on a smartphone you have access to. If necessary, do an Internet search to find out how to make a conference call on the smartphone. You could use search words such as:

[Name of device] + "conference call"

Webinar

The term webinar comes from 'web' and 'seminar' – a seminar that takes place over the 'web (internet).

Seminar	A type of meeting where information and/or training is presented.

A webinar is like an online lecture or lesson held over the internet. Often attendees use web conferencing apps to join. Unlike a web conference, the communication is mainly one way - from the person giving the webinar to the attendees, although there may be some interaction such as a question time.

Webinars are very useful for upskilling employees as many employees can attend the webinar at once without the need for travel or leaving the office.

DIGITAL TOOLS - EXAMPLES

Webinar tools

- **GoToWebinar:** https://www.gotomeeting.com/webinar/
- **Zoom – Video Webinar:** https://zoom.us/webinar
- **Adobe Connect Webinars:** http://www.adobe.com/products/adobeconnect/webinars.html

12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Connectivity applications

Connectivity applications are software apps used to connect with another device via a local area network (LAN) or over the Internet.

Local Area Network (LAN)	A computer network that connects devices in a building (or in a group of buildings that are close to each other). An example would be a computer network connecting devices in a school, university campus, office building, or even someone's home.
Wireless Local Area Network (WLAN)	A LAN that connects using wireless technology (rather than Ethernet, etc).

Activity

1. Do you connect to a network at your place of work or study, or at home? If you are not sure, check with your teacher, manager, etc.

2. If so do you connect wirelessly or through an Ethernet cable?

We are going to look at the following types of connectivity apps:

- QR Code reader
- web-specific connection app
- remote login apps

QR code reader

'QR' is short for 'quick response'. QR codes are bar codes that contains a link to a website. They can be scanned by most mobile devices that have cameras. They have a variety of uses.

- You may have seen them on concert tickets. They are scanned at the door and the system then knows that that ticket has been used.
- You may recall that during COVID businesses had posters with QR codes that the customer would scan. This recorded where they had been on their app which was useful for contact tracing.
- QR codes are often used for advertising, on brochures, flyers and business cards. The person scanning the code can then follow a link to the organisation's website instead of having to type in their web address. Try scanning the QR code shown above as an example.

QR codes can also be used to store other types of information including text, a pdf, an SMS (text message), image or sound files, and more.

Most smartphones and tablets have QR readers build in. If not there is a range of apps you can download to scan a code.

DIGITAL TOOLS - EXAMPLES

QR Code Readers

The following are examples of QR code readers for Android and iOS devices:

- i-nigma
- Kaspersky's QR Scanner
- Quick Scan
- QR Droid (Android only)

NOTE: Android apps can be downloaded from the Play Store. Apps for iOS devices (eg iPhone/iPad) are available from iTunes.

QR Code Generators

The following are examples of online QR code generators that can be used to create your own QR codes:

- http://www.qr-code-generator.com/
- https://forqrcode.com/
- http://www.free-qr-code.net/
- http://goqr.me/
- https://www.qrcode-monkey.com/

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Web specific connection app

These are apps that allow you to connect with others (and/or their devices) using a web-based app ie you don't download an app, you log in through your browser. You have already learned about web conferencing apps which allow screen sharing. There are also apps specifically for this purpose. For example a **screen sharing** app allows you to share your screen with another person so they can see what you are doing and vice versa.

Screen sharing apps are useful for collaboration on a document, troubleshooting (solving a problem) or showing someone how to do something.

Web-based video calling and messaging apps allow you to connect with others without needing an app installed, you just need access to the Internet and a browser.

Examples

- A group of you have been researching a topic for a school project and you use screen share so everyone can see your findings.
- You can show someone how to use a feature of a piece of software instead of writing down the instructions.
- You can get help from someone troubleshooting an issue with your computer - they can see the problem so can get a clearer understanding of the issue.

DIGITAL TOOLS - EXAMPLES

Website specific connection apps

The following are examples of website specific connection apps.

- http://www.screenleap.com (screen sharing)
- https://showmypc.com/ (screen sharing)
- Google Meet: https://meet.google.com/
- Zoom: www.zoom.com https://www.zoom.com (screen sharing, video calls, messaging)

Remote log-in apps

With remote log-in you can access a computer remotely. Other names for this type of software include remote access or remote desktop software. Examples of who may need to do this include:

- Help Desk technicians who need to connect to your computer to resolve problems. With a remote log-in they don't need to be physically at your desk to solve the problem.
- If you are working away from your office, ie on a business trip, you can access your office computer, its software and files.
- If you work from home you can access files and software on your organisation's computers, you don't have to have it installed in yours.

DIGITAL TOOLS - EXAMPLES

Remote log-in apps

The following are examples of remote log-in apps:

- **Windows Remote Desktop** – remote access software that is part of the Windows operating system. For more information on how to use it see: https://support.microsoft.com/en-us/windows/how-to-use-remote-desktop-5fe128d5-8fb1-7a23-3b8a-41e636865e8c#ID0EDD=Windows_11 or scan the QR code.

- **Windows Remote Assistance** – app that allows someone else to control your device remotely and fix a problem you have with your device. For more information, see: https://support.microsoft.com/en-nz/search?query=remote%20assistance or scan the QR code.

- **Team Viewer app** https://www.teamviewer.com/en-nz
- **Nomachine remote desktop app:** https://www.nomachine.com/

2a © Instant Education Solutions Ltd www.instant.org.nz

LESSON 2:

Collaboration tools (Part 2)

Learning Objectives

When you have finished you will be able to identify and describe a range of digital tools used for online learning, communication and networking. This includes the following tools:

- Learning management systems (LMS)
- Online learning programs
- Video chat
- Social messaging
- Ephemeral messaging
- Microblogging

Online learning tools

An online learning tool allows you to learn, teach or train via the Internet. Web conferencing and webinars allow for online learning, however there are also specific tools.

Learning management system

This software has been developed as a way for educational organisations such as schools, wānanga and universities to develop, deliver and administer learning content online. A learning management system (LMS) may or may not be used to deliver the material, but it may be used for exercises or reviews, assignments or assessments. It may also be used to communicate with the students on the course, and as a way for the students to ask questions or communicate with their teacher or lecturer. Examples of LMS use include the following:

Course delivery: Students can access the materials from remote locations and when they require it.

Progress tracking: The teacher can track the progress of the student and record their assessment results .

Collaboration: Students can share documents with each other and their tutor. They can also hold discussions, get feedback etc.

Central storage location: All resources, student work and lessons can be stored in one place.

DIGITAL TOOLS - EXAMPLES

Learning management systems

- **Google Classroom:** https://edu.google.com/workspace-for-education/classroom/
- **Canvas:** https://www.instructure.com/en-au/canvas

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Online learning programs

If you have a device that is connected to the internet, you can attend an online course, some of them are even free! Others are free to audit ie you can view the material, but to get a certificate or collaborate with other class members and submit asignments, you need to pay a fee.

Most online learning programs include audio, text and video to deliver the content.

DIGITAL TOOLS - EXAMPLES

Online learning programs

- **Codecademy:** https://www.codecademy.com/
- **MIT Open Courseware:** http://ocw.mit.edu/index.htm
- **Khan Academy:** https://www.khanacademy.org/
- **Skillshare:** https://www.skillshare.com/en/
- **Coursera:** https://www.coursera.org/

Social networking

Social networking tools allow people to 'socialise' and network over the Internet. It includes apps and websites that make it easy for people to connect with family, friends and other people who have the same interests. Examples include Facebook, Instagram, LinkedIn and even YouTube.

Social messaging

Social messaging is another name for an instant messaging tool that is built around a social networking platform such as Facebook (Facebook Messenger), Instagram (Threads), and so on.

You can attach files, images and video to your messages, and can send to a group of people or just one. You can message someone on Facebook even if you are not 'friends' with them.

Many organisations use social messaging as a way for customers to contact them. For example, if you look at an organisation's Facebook page, you may see the option to message near the top.

DIGITAL TOOLS - EXAMPLES

Social networking/social messaging

- **Facebook: www.facebook.com/**
- **Instagram: www.instagram.com**
- **Linked in: www.linkedin.com**

Ephemeral messaging

An ephemeral message will disappear after a few days. These are usually kept for informal uses where there is no requirement (or wish) to keep a record of the communication.

Ephemeral	Something that lasts for only a very short time.

DIGITAL TOOLS - EXAMPLES

Ephemeral messaging apps

- **Snapchat:** http://www.snapchat.com
- **Viber Wink:** http://www.viber.com/en/wink

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Photo and video sharing tools

There are a variety of apps for sharing videos and photos, YouTube (video) and Flickr(photos) being two well known ones. These tools allow you to upload your video or photos and allow others to view, comment and share them (depending on the copyright).

Activity

1. What are some other video or photo sharing tools? If you don't know of any, try a Google search.

2. What are some of the common features of photo and video sharing tools?

3. What photo or video sharing tools have you used? What did you use them for?

Microblogging

A **blog** is a regularly updated web page, usually informal, that contains news or information. these can contain a number of paragraphs of text, similar to a magazine article. A **microblog** is a very short blog, or individual images or links to videos.

Most microblogging tools have a limit on the number of characters there can be in a single post. For example, X limits 'tweet' length to 280 characters for free accounts.

Organisations often use microblogs as marketing or communciation tools, to give brief announcements or updates to their followers.

tweet	A tweet is the word X (Twitter) uses to refer to a microblog (or micropost).
character	A computer character is a single letter, number, punctuation mark, symbol or space that can be entered into a digital device.

DIGITAL TOOLS - EXAMPLES

Microblogging tools

- **X:** https://twitter.com/
- **Tumblr:** https://www.tumblr.com/

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Chats

Chats are a way of talking to someone in real time over the internet. You may have seen that web conferencing software such as Teams has this facility. Chats are synchronous - that means they happen 'live'. There isn't a delay between transmission and receiving the message.

Asynchronous	Synchronous
Not happening at the same time. **Example:** *An email is an asynchronous form of communication because it can't be read until it has been received and may take time to be delivered to the recipient's inbox. You can't have a conversation in real time over email.*	Happening at the same time. **Example:** *In a chat, people all chat (using text) at the same time. They read what the other people in the chat room are saying as soon as they have written it, and they respond immediately – as if they are having a written 'conversation'.*

You can also chat in real time over social messaging. You can set up a 'group chat' for a specific group of people eg the people in your team, or a family group.

There are also sites called chatrooms, where people with similar interests can hold realtime chats.

DIGITAL TOOLS - EXAMPLES

Chat sites

- **Backchannel Chat: http://backchannelchat.com/**
- **KidzWorld Chat: http://www.kidzworld.com/chat/**

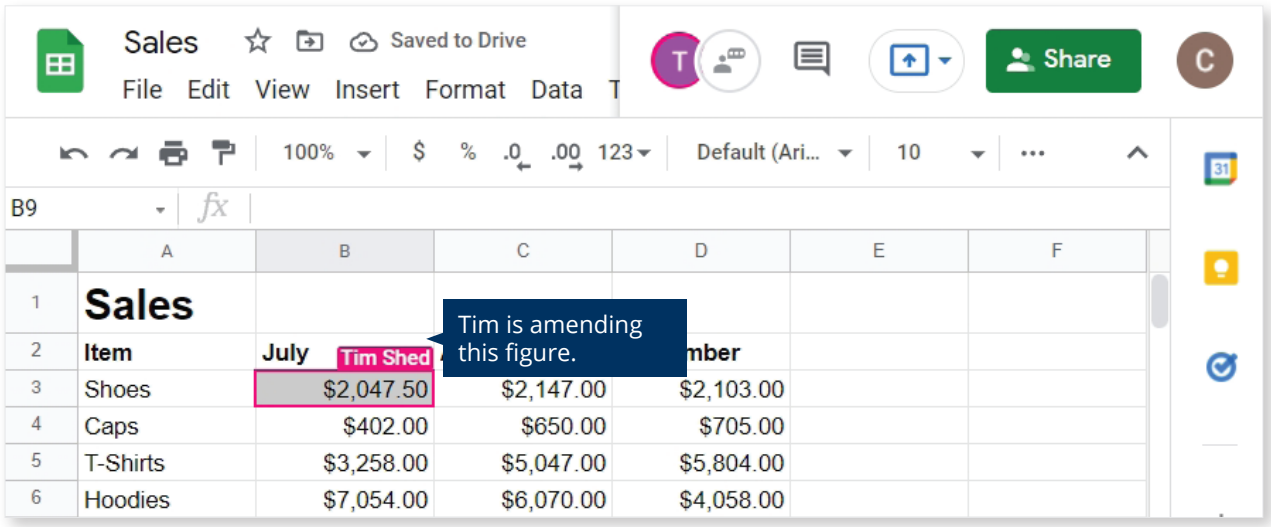

Document collaboration

There are a variety of apps that allow you to share, review and edit documents in real time.

This means instead of having to send a copy of the document to each person in the team, and then having several copies with different edits and comments, everyone can edit and comment on the same document file. And they can do this in real time if required. (Note: Some people like to keep a copy of the original for reference, or in case something goes wrong).

Depending on the permissions set, people can either review and add comments, or edit the document itself.

In the spreadsheet below, Tim Shed is collaborating on Chris Hobb's spreadsheet file. They both have the spreadsheet open, and Tim is making changes. This is what it would look like on Chris's computer.

DIGITAL TOOLS - EXAMPLES

Document collaboration tools

- **Google (Google docs, Google Sheets etc):** https://google.com/
- **OneDrive:** https://onedrive.live.com/login/
- **Adobe Acrobat:** https://adobe.com/
  Note you need an Acrobat or Creative Cloud paid or trial account)

12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

LESSON 3:

Effective use of collaboration tools

Learning Objectives

When you have finished this lesson, you will be able to:

- select appropriate collaboration tools for use in a digital environment
- use collaboration tools in an effective manner

In the first two lessons, we looked at the different types of collaboration tools that can be used in a digital environment. In this lesson, we focus on how these tools can be used to collaborate and communicate **effectively** with others.

Selecting the appropriate collaboration tool

You have learned that there is a wide range of collaboration tools. But how do you know which tool will be best to use in different circumstances? Answering the following questions can help you identify an appropriate collaboration tool.

- ☐ What is the **purpose** for which the tool will be used?
- ☐ Who is the **intended audience**? In other words: Who will you be communicating with?
- ☐ What is the **context** and **digital environment** in which you will be communicating? The **context** is the situation and setting in which the communication occurs (ie when and where the communication is taking place). There are several factors that could impact the choice of collaboration tool. These could include:
    - **organisational policies and requirements** – the organisation in which the communication is taking place may have requirements as to what type of tool should be used in a specific situation
    - **the digital systems available** – eg is a broadband connection available, or will communication need to occur over a mobile network?

Look at the examples below.

Example 1

You urgently need to arrange a quick 'catch up' today with one of your team mates to look at something together. You both have mobile phones and know each other well (you have been friends for quite a long time). You know your team mate is currently in town and in all likelihood, does **not** have access to a broadband connection.

Purpose: Arrange an informal meeting.

Subject matter: Information. You need to inform your team mate that a meeting is needed, and to let them know when you are available for the meeting.

Intended audience: Your team mate, who is a good friend of yours.

Context and digital environment: The following factors related to the context and digital environment will affect your choice of collaboration tool.

- Your team mate will not have access to a broadband connection, so will be communicating using a mobile network.
- You need to arrange the meeting urgently.

You decide that sending a text via your mobile phone will be the best tool to use. This is because:

- you will be using the tool to arrange an informal meeting with someone you are good friends with - which means that the communication can be informal
- your friend will need to communicate using a mobile network – so trying to video call or IM them may not be ideal as they may not have these services running; and if they do, they will use a lot of mobile data
- you need to contact your team mate urgently because the meeting needs to be arranged for today; therefore, using something such as email would not be ideal

Compare this to the example that follows, which has the same main **purpose** (to arrange a meeting), but a different intended **audience**, **context** and **digital environment**.

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Example 2

You need to arrange a meeting with your key stakeholder to get their feedback and signoff on the initial design ideas your team has developed.

You hope to have the meeting within the next two or three weeks. You have an email address and mobile number for the stakeholder.

Purpose: Arrange a formal meeting to get stakeholder feedback and signoff.

Intended audience: Your key stakeholder.

Context and digital environment: The following factors related to the context and digital environment will affect your choice of collaboration tool:

- Your key stakeholder could potentially be contacted via email or mobile phone.
- The meeting is not urgent – you have quite a bit of time to arrange it.
- You have only met your key stakeholder once.

You decide that sending an email will be the best tool to use. This is because:

- you will be using the tool to arrange a formal meeting with someone you do not know very well, and who you need to interact with more formally (because they are an important stakeholder
- sending an email means the person is not interrupted by a phone call, text, and so on, but can respond when it best suits them
- email is a suitable form of communication when an urgent response is not required
- email allows you to send a more detailed message than a text or instant message would allow

The **subject matter** of the communication can also impact on the type of collaboration tool that will be most effective. In other words: what will you be communicating using the tool? The main aim of using collaboration tools is to be able to effectively contribute ideas, information, and opinions to the team/group you are collaborating with. Some collaboration tools (eg video conferencing or chat, social networking, etc) are better suited to the sharing of ideas and opinions. Other tools are better for sharing information (eg planning tools, email, etc).

Activity

Task 1
For each of the scenarios described below, do the following:

- Identify the purpose, subject matter, intended audience, context, and digital environment.
- Indicate what type of collaboration tool you will use and why.

NOTE: For all scenarios, **unless otherwise indicated**, you can assume that both you and the person you are communicating with have access to all the different digital tools discussed in Lessons 1 and 2.

Scenario 1
You want to send your team members a summary of the notes you took at your previous team meeting. You have put the notes in a separate Word document. You would also like to send your teacher a copy of the message to your team members (included the meeting notes).

Purpose:

Subject matter:

Intended audience:

Context and digital environment:

Collaboration tool: Select which of the following **communication tools** you would use, and give a reason for your answer.

☐ Instant Message ☐ Email ☐ Video chat

Scenario 2
You want to share a project plan with all your team members so that they can see the project schedule and resources needed for the different project tasks. Parts of the project plan will also be communicated to your key stakeholder – for example, progress reports showing planned work versus actual work completed. Your key stakeholder does **not** have access to Microsoft Project or to any task management tools, but you and your team members do. Your key stakeholder does, however, have access to all other types of collaboration tools.

Purpose:

Subject matter:

Intended audience:

Context and digital environment:

Continued on next page...

Collaboration tool: Select which of the following **coordination tools** you would use, and give a reason for your answer.

☐ Calendar ☐ Workflow system ☐ Time tracker

☐ Planning or task management tool

Scenario 3
One of your team mates is having difficulty using one of the apps needed to complete your project. They want to show you what they have been trying to do and what has been going wrong. However, you are not able to meet with them face-to-face to see the problem onscreen for yourself, and your team mate does not have access to a video conferencing tool such as Zoom.

Purpose:

Subject matter:
Intended audience:

Context and digital environment:

Collaboration tool: Select which of the following **connectivity tools** you would use, and give a reason for your answer.

☐ QR code reader ☐ Remote login

☐ Web specific connection app (eg screen sharing, messaging, video calling)

Continued on next page...

Scenario 4
By the end of the week, you and your team members need to have a meeting to look at and discuss the concept designs you have developed. However, because of transport problems you will not be able to get together face-to-face for the meeting.

Purpose:

Subject matter:

Intended audience:

Context and digital environment:

Collaboration tool: Select which of the following **conferencing tools** you would use, and give a reason for your answer.

- ☐ video conferencing (with screen sharing)
- ☐ webinar
- ☐ telephone conferencing (with screen sharing)

Scenario 5
Your team is working on a website design project. You have been tasked with taking photographs that may be suitable to use for the website's landing page. You want to share the photos you have taken with your team mates, to see which images they think will work best for the website. You need to get very quick and concise feedback on the images because it is starting to get dark and you don't have a lot of time left to take any additional photographs needed. The only digital device you currently have access to is a mobile phone. You want to keep a record of the images you shared with your team mates, as well as their feedback.

Purpose:

Subject matter:

Intended audience:

Context and digital environment:

Continued on next page...

Collaboration tool: Select which of the following **social networking tools** you would use, and give a reason for your answer.

☐ online social network ☐ messaging ☐ Video sharing

☐ photo sharing ☐ ephemeral messaging ☐ micro-blogging ☐ chat sites

Task 2

1. What learning management system does your learning institution use?

2. Does the system allow you to review and edit documents created by other people on your course?

3. If you answered 'yes' to the question above, make sure you know how to use the document sharing and editing tool.
4. Make sure you know how to share documents and other information with your teacher using the LMS. If you do not know how to do this, check with your teacher.

Using collaboration tools in an effective manner

The first step in ensuring collaboration tools can be effectively used, is to select the best tool for the job. Once you have done that, it is important to use that tool according to good practice.

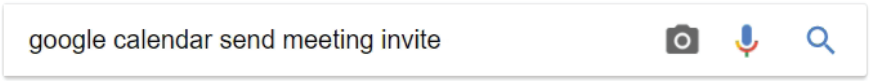

Good practice

Good practice refers to using tools and techniques in an effective way to achieve a specific result. For digital tools, it means choosing the appropriate feature or function of the tool to enable the tool to be used correctly.

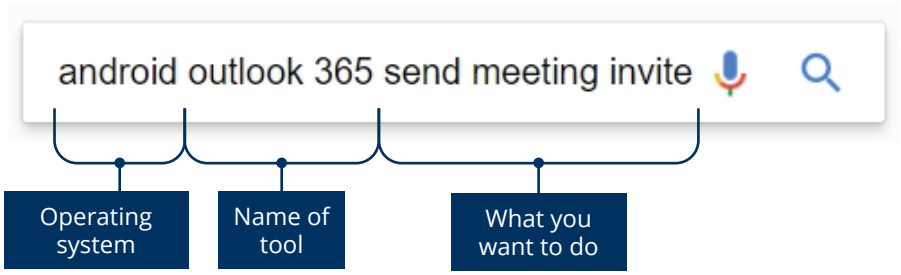

Where possible, you should select and use tools that you are familiar with. For tools that you have not used before, it is important to make use of the help resources available for that tool, to ensure you use it correctly. In most cases, you will be able to find these help resources on the Internet, using a Google search.

Use the following search criteria:

[name of tool] + [what you want to do]

For example:
Adding the name of the specific device or operating system you are using can help refine your search criteria. For example:

Legal and organisational requirements

A part of following good practice is to keep within the law when using digital tools. An important legal requirement is following **copyright** rules.

Copyright

When someone creates a new work, be it written, an image, video, music, software code, they automatically own the copyright. Unless they change the terms, the material cannot be used by anyone else without permission, and sometimes a fee is required. The terms of the licence sets out the usage rights of the work - what rights people have to use the work.

Exceptions to this rule include Creative Commons and Public domain licences.

- **Public Domain:** If an author puts their work in public domain, anyone can use it for any purpose without needing the author's permission.
- **Creative Commons** is where an author of some content (such as a graphic) licenses it to be used under certain conditions without the user needing to pay for it. These conditions may include:
    - **Attribution** - you must acknowledge the source of the content ie the author.
    - **ShareAlike** - indicate any changes you have made, and share the adapted material under the same conditions (licence) as the original.
    - **Non-commercial:** You cannot use the work in something that you plan to sell or make money from.
    - **No derivatives**: You cannot change the work, or distribute something derived from it.

https://creativecommons.org/share-your-work/cclicenses/

The licence will be expressed in two ways - either using symbols or letters. e.g.

CC-BY-ND or 

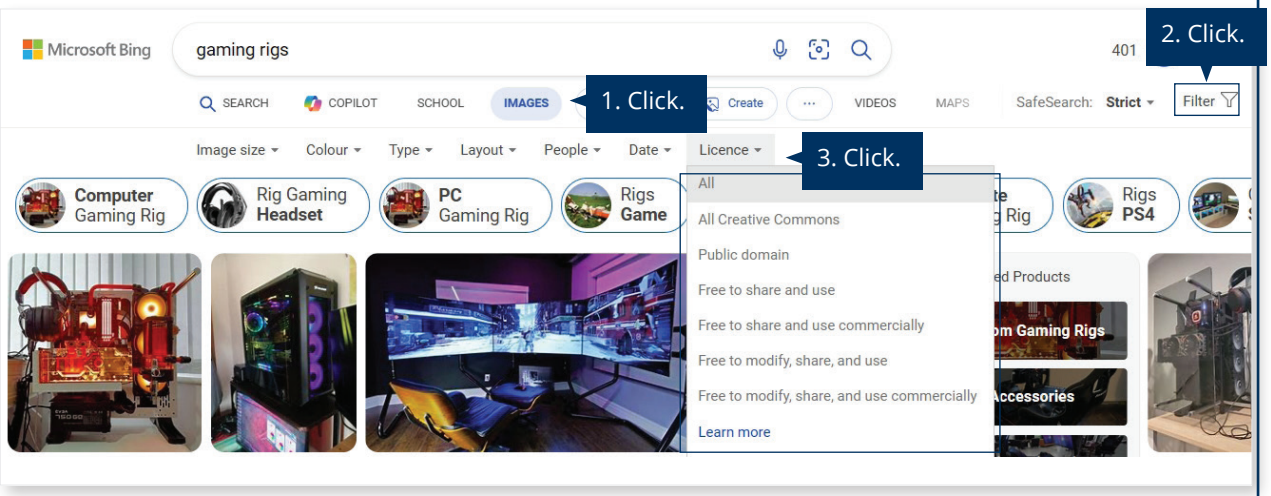

A work with this licence can be distributed, including commercially, as long as it isn't changed and the author is acknowledged.

Scan for more information.

12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Activity

1. When you search for images, you can specify the usage rights you want in your search engine. Have a look at this screenshot of a search using Bing.
   For each option, describe in your own words what you think it may mean.

Usage right	Explanation
Public domain	
Free to share and use	
Free to modify, share and use	
Free to modify, share and use commercially	
Free to share and use commercially	

Many websites contain copyright information at the bottom of the page. Some will also include a link with more information about the type of copyright licence that applies.

1. Go to www.wikipedia.org.
2. Scroll to the bottom of the page where you will see the copyright information (highlighted).

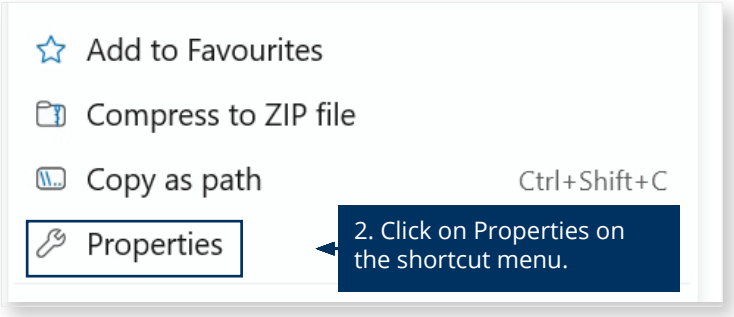

3. Click on the link to see more information about the licence.

This gives you more information about the conditions under which you may use the content on the web page.

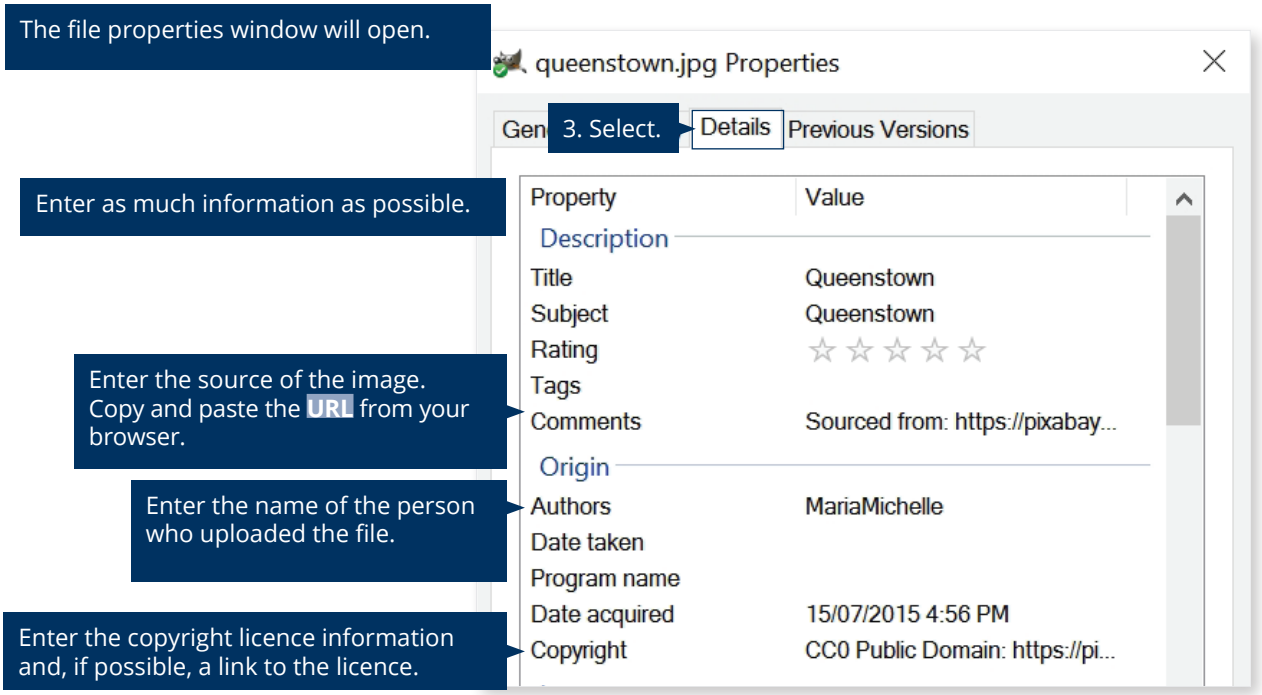

Keeping track of media and licence information

As you will normally have to provide an attribution, it is a good idea to make sure that you store this information somewhere at the time you acquire the image. A useful place to store it is in the properties of the image file. The instructions below show you how to do this.

1. In File Explorer, right-click on the file (eg an image file you have downloaded from the Internet).

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Note this method will work with jpg files but it won't work with PNGs. You may need another method such as a text file or document file that contains copyright information for your images.

Activity

1. Do a search for an image of a kitten that you want to be able to change and use in a magazine that you will be publishing and selling.
2. Download the image and add the following information to the file properties:
   - The URL of the webpage you sourced the image from.
   - The author of the image (if available).
   - The copyright licence information for the image.

Let's look at an example.

Privacy

According to the Privacy Principles set out in the Privacy Act 2020, organisations are not allowed to:

- share someone's personal information with others
- use someone's personal information for any other purpose than for which the information was originally obtained

Privacy

Susan is the receptionist at a large firm. A client phones wanting to speak to Raj. Susan knows Raj is on leave today but has offered to take urgent calls. The client says he needs to speak to Raj urgently and demands his personal contact details.

Susan knows that under the Privacy Act she cannot give this information out as it is personal to Raj. She therefore offers to contact Raj herself and ask him to call the client.

It is a legal obligation to protect someone's individual privacy in an organisation, however it is also good practice and good sense to protect both your own and others privacy in everyday life.

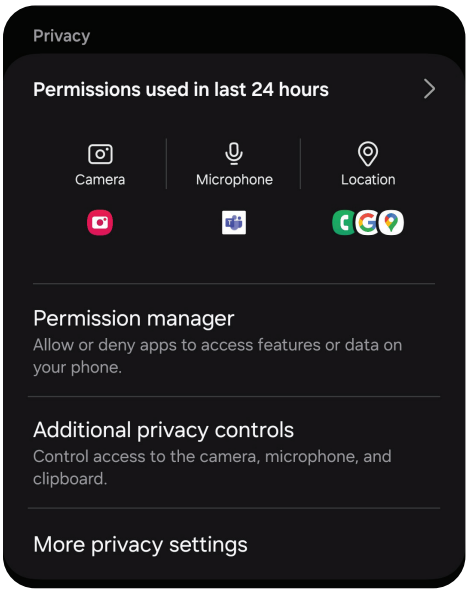

- Who do you want `to have the information? Be very careful about what you share online. Once online, it's there forever, even if you delete the post or the image at a later date. Someone may have already copied it or downloaded it. Do you want that picture of you behaving badly on holiday seen by a prospective employer?

- Sharing personal information can also lead to identify theft, where someone pretends to be you and uses your identity for fraud or theft.

- Think of others - it may seem funny to post a video of your friend being silly but would they agree? People have the right to decide what information of theirs is public. Never post information, video or images of others without their permission.

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Regularly check your privacy settings. The privacy default settings on apps are changed from time to time. It is important that you regularly check your privacy settings to make sure they are still protecting your privacy. On most tablets, mobiles and other devices, you can also set privacy settings for some apps. You will find privacy settings by opening Settings on your device. An example from an Android device is shown below.

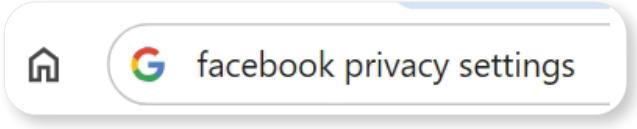

Activity

1. Investigate the privacy settings for all the devices and social networking and communications apps you use, as well as any account you have (eg Facebook account). If you are not sure where to find the privacy settings, do an Internet search to find information on how to do so.

For your search, use the following search terms.

[Name of application/device] + 'privacy' + 'settings'

For example, if you want to find out about Faceobooks privacy settings:

2. Configure suitable privacy settings for your devices and accounts.

LESSON 4:

Effective communication practices and online etiquette

Learning Objectives

When you have finished this lesson, you will be able to use the following when collaborating with others.

- Effective communication practices
- Appropriate online etiquette
- Meeting recognised conventions

Expected behaviours and attitudes when collaborating with others

Some behaviour can be very destructive and disruptive when working with others: it can lead to disagreements, unhappiness and a **dysfunctional** team.

It is important that every member of the team commits to behaviours that will support effective communication. The following are some of the types of behaviours that lead to effective communication when collaborating with others.

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

Respect

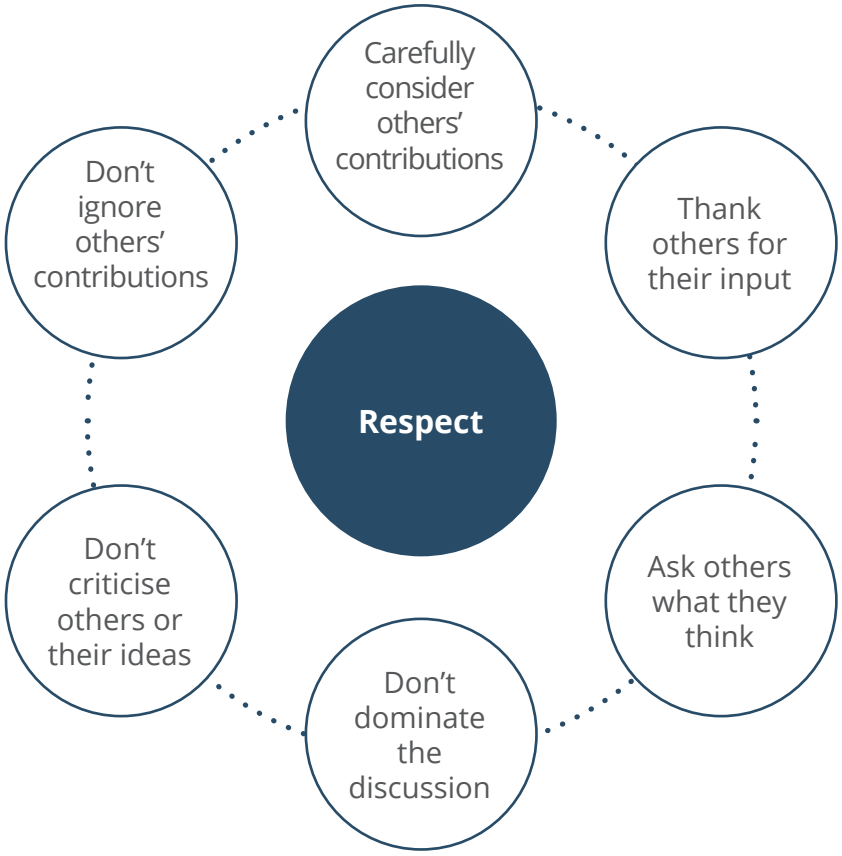

Showing respect for others and their contributions is one way to ensure the members of a team work well together.

Listening or thinking carefully about the ideas, information and opinions others share is one way to show respect for the person and their contributions.

When people feel their ideas and opinions are being given proper consideration and respect, they are likely to carefully consider what you communicate too. On the other hand, if they feel you are not valuing their input, they might be less willing to:

- share ideas, information and opinions with you
- consider what you have to communicate

Below are some other ways you can show this respect for others when collaborating.

I don't always agree with the ideas or opinions some team members give. But even if I don't agree with them, I never criticise the team member themselves. Instead, I calmly and respectfully say why I disagree with their idea or opinion, or else I offer an alternative idea or opinion.

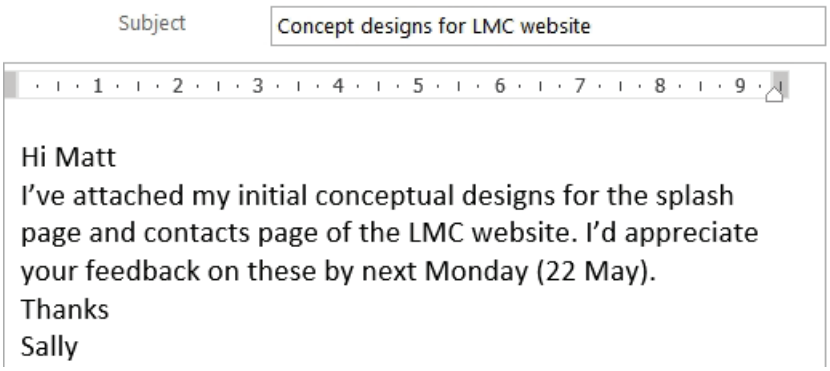

Timeliness

Timeliness	Doing something in good time and at the right time.

When collaborating with others it is important that you respond to their input, or requests for **your** input, in a timely manner. This means that, for example, when someone asks you for feedback on something, you do so as soon as reasonable. If they have given you a deadline for your feedback, you should make sure you meet that deadline. Look at the example below.

Example: Responding in a timely manner
In the email below, Sally is asking for Matt's feedback on the conceptual designs she has created. He has given a specific date by which he would like the feedback.

To respond in a timely manner, Matt should get his feedback to Sally before or on Monday, 22 May. As a specific time is not specified, Matt should try to get the feedback to Sally by the **start of the day** on Monday, 22 May.

Responding to others in a timely manner is very important because:

- others may need to wait for your input before they are able to start or complete a task they need to do
- if you don't provide your input on time, the entire team objective may not be met by the deadline

If you don't think you will be able to provide input in a timely manner, tell your team as soon as possible. This shows your respect for your team members. It also allows the team members to adjust their own plans as needed.

2a © Instant Education Solutions Ltd www.instant.org.nz

Confidentiality and discretion

confidentiality	not revealing or sharing information that is meant to be kept secret or private
discretion	speaking and behaving in such a way that you don't reveal confidential information or embarrass or offend someone

In some cases, your team will be working on a confidential activity, or you may need to work with confidential information. If you are working with confidential information or on a confidential activity, it is crucial that you do not share the information with anyone who is not authorised to have that information.

Make sure that you behave in a way that avoids sharing confidential information with others. This includes behaving with **discretion** so that you do not unintentionally reveal any information. For example, don't discuss the activity with other team members in a public place where your discussion could be overheard.

I was part of a team working to prepare for the product launch of our company's newest skateboard range. It was crucial that no information about the new range was revealed to anyone outside of the team, because we did not want information about the new products leaked to the public.

Behaving with discretion also means that you don't speak or behave in a way that will embarrass or offend others. This might include criticising others, revealing personal information about them, and so on.

Sometimes, as part of my collaboration with others, I become aware of some of their personal information. For example, one of my team mates told me about a personal problem she is experiencing. I am really careful to keep that information private and not tell anyone else about it. I do this even if the other person has not specifically asked me to keep it a secret.

Language use

Many organisations have requirements about what is considered appropriate language use in the organisation. For example, there may be a rule that no-one may use bad or offensive language (ie swearing, **racist** or **sexist** language, etc).

- These requirements need to be followed at all times, including when you are collaborating with others.
- Even if your organisation does not have such requirements, it is important that you follow the standard rules of courtesy and respect when communicating with others.

The people I am collaborating with are all members of my class, so I know them quite well. Even though we communicate quite informally with each other, we all know it is never appropriate to use swear words or to say things that are racist or sexist. Some people may think it is just a joke, but others may be hurt or offended by it (even if they don't say so). Out of respect for the members of our team, I am always careful not to say anything that could be hurtful or offensive.

Activity

Look at the following extract of a chat between Matt and Katie. Matt and Katie are members of a team who have been asked to arrange the Staff Christmas Party for their organisation. They need to report back to Jane about the venue for the party.

I'm sorry Katie, but I think having the Staff Christmas Party at Café Cool is a dumb idea. For one thing …

What do you mean, 'a dumb idea'? I haven't heard you come up with anything better! Easy for you just to criticise, rather than …

Hang on Katie, don't get so worked up! All I'm try to say is …

You're telling me not to get worked up, but you're the one who is being critical, as usual!

What I'm trying to say is …

Look, this is a pointless discussion. We'll just each tell Jane separately what we think should happen about the party.

Continued on next page...

2a © Instant Education Solutions Ltd www.instant.org.nz

Being respectful of other cultures

When you are collaborating, you will be dealing with people from a wide variety of cultures. This may be when dealing with people locally or overseas.

You cannot always see or hear who you are collaborating with so it is important not to assume they will be the same as you. Remember we live in a diverse world and people have different values and beliefs.

- Use clear, simple English.
- Do not use language that could be considered racist.
- Consider time zones when scheduling meetings.
- Understand body language differences eg a direct gaze is offensive in some cultures.
- Don't make generalisations or assumptions because a person looks a certain way.

Commitment

A team can only be strong if each member of the team is fully **committed** to the team.

committed	Being loyal, hardworking, and dedicated to something.

Two key ways in which you can show your commitment to a team is by:

- contributing your ideas, information, and opinions to help the team achieve their goal
- completing all tasks you have agreed to do, and providing input in a timely manner

Meetings

People who are collaborating will often have meetings to discuss important matters. These meetings may be face-to-face, or using tools such as video conferencing software. It is important that all team members attend all meetings. If you miss a meeting, you are likely to miss out on important information, and you may not be contributing effectively to the team.

Participating in a meeting is not just about *being* in the meeting. To truly participate in a meeting, you need to:

- listen carefully to what is said
- make contributions to the discussion when you have something **useful** to add.

Also keep in mind that it is not enough to just contribute ideas, information, and opinions. To really show your commitment to the team, you need to make sure that your contributions are:

- well thought out
- appropriate and relevant to what is being discussed
- detailed – so that people have enough detail to evaluate the contribution you have made and to use it (if appropriate).

Task completion

Teams work by breaking up one big task (ie main objective) into smaller, more manageable sub-tasks. The individuals in the team each complete a specific sub-task(s) which contributes to the overall team objective.

If you have agreed to do a task set by the team, it is important that you complete that task as required, and in a timely manner. If you do not complete your task in a timely manner, you will be letting down your team. As a result, the team objective may not be achieved or someone else might need to do your task for you.

2a © Instant Education Solutions Ltd www.instant.org.nz

Digital citizenship

The Internet is like a country in which anyone with an Internet connection can be citizen. Being a citizen of the Internet means you have both rights and responsibilities. For example, you have the right to access information on the Internet, even if you have a disability (eg difficulties with your sight).

Being a good citizen also comes with responsibilities, such as sticking to the rules (conventions), treating others with respect, and making a positive contribution.

It involves displaying good etiquette when communicating with others.

Etiquette	What is considered polite, proper, and appropriate in a specific context. **Online etiquette** refers to what is considered polite, proper, and appropriate when communicating or interacting online.

The rules of etiquette are important online, especially when using text. It is very hard to collaborate and communicate with others if your behaviour upsets or offends them. It is much harder to convey emotion using text as you don't have the person's facial expressions and gestures to help you understand the underlying meaning. Therefore making sure you behave in a polite and appropriate manner online is more important.

Netiquette	Netiquette refers to socially acceptable online behaviour (ie the do's and don'ts of communicating online). It is a combination of the words 'Internet' (or 'net') and etiquette.

Below are some general tips for applying netiquette and being a good digital citizen when collaborating with others.

- **CAPITAL LETTERS ARE CONSIDERED SHOUTING.** Unless it is grammatically correct, such as an acronym (eg NASA) **do not** use all capitals for whole words and sentences or the reader will think you are shouting.
- **Use emojis with care.** Emojis can help convey emotion, but are only appropriate in informal communication.

Continued on next page...

- **Spelling, grammar and punctuation**: Even in a chat, make sure your spelling, grammar and punctuation is correct. A comma or full stop in the incorrect place can lead to a misunderstanding.

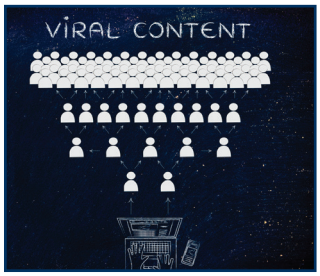

VS

- **Keep to the topic:** When posting a message in an online community (eg Internet forum, chat room, or microblog) or when replying to an email, it is important to stick to the identified topic.
- **Don't be a troll.** On the Internet, someone who deliberately tries to start arguments or upset people online is known as a troll. Examples include posting off-topic messages or writing something racist, sexist or otherwise intended to make people angry or upset. This could also lead to a **flame war** - a hostile online argument. You may not only be banned from the site, you may be charged under the **Harmful Digital Communications Act 2015** which makes it an offence to threaten, intimidate, harass or be grossly offensive to another person online.

  Under New Zealand law, people who use digital communications to deliberately cause serious emotional distress to others could be punished by up to two years in prison or a fine of $50,000! Whether the bullying is in the form of a text or a social media post, it is still hurtful and a criminal offence, even though the person has not been physically harmed.

- **Bad language (eg swearing) and offensive language (eg sexist, racist) is not acceptable in <u>any</u> context.** Remember that anything you say or write using a digital tool on the Internet could be stored forever and/or shared with many other people. Remember something posted online can go viral in minutes - you may have only wanted one person to see it, but it doesn't take long for millions. And if someone screenshots your post, deleting it won't help.
- **Consider others**. Respect the privacy of others, and ensure you don't use any offensive terms or statements. If you wouldn't say it to the person's face, don't say it online.

  Remember, what goes online, stays online.

  - Are you being a **cyberbully**, a troll, or starting a flame war by what you are saying?

Continued on next page...

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

- How will the other person feel when they read what you have written?
- How would you feel if someone wrote the same thing to you?

Recently I was on a chat with other students in my group project. One of the other students made a post saying their part of the project would be a bit late, and they were sorry but it couldn't be avoided. I wasn't very nice about it and told them off, and that being late will mean the whole project gets delayed. After the chat, my friend phoned me and told me that the reason our classmate was going to submit late was that his father was in hospital. Everyone else in the group was angry with me and I felt terrible for what I said.

- **Be tolerant.** Remember, you may not be communicating with someone from the same background, or the same country, as you. Don't make assumptions, and be tolerant if the person's English isn't perfect or they don't understand you the first time. It is up to you to make sure your communication is fit for its audience.

Sharing or posting images and video

Make sure you keep the following in mind:

- **Not everyone is offended by the same thing.** Just because you think it's OK doesn't mean others will. Especially if children are likely to see it.
- **Copyright and privacy are protected by law**. As we discussed earlier, there are laws that protect both copyright and privacy in New Zealand (and the rest of the world). Many organisations have procedures and requirements for the sharing of digital information that can help ensure you (and the organisation) are not guilty of breaking any laws related to copyright and/or privacy. Make sure you know what these procedures and requirements are, understand them properly, and follow them at all times.
- **REMINDER**: Remember the following key points:
  - **Copyright:** It is illegal to copy and share someone else's content without permission. Make sure you keep to all copyright requirements when using someone else's images, video, text or any other content.
  - **Privacy:** You should also not share someone else's personal details without their permission.

Cyber safety

Keeping yourself and others safe is an important part of collaborating in a digital environment. This includes keeping your and others' data safe and secure.

Cyber safety	Safe and responsible use of digital tools, including online tools.

Below are some basic tips to keep yourself safe from risks such as identity theft, **loss of privacy,** or having your **data stolen** or **destroyed**.

- **Protect your device**. Ensure if someone has physical access to your device they can't open it and access the data. You can use a variety of measures such as a password, PIN, fingerprint, voice or face recognition.

  You can also set it to lock or erase remotely if it is lost.

My phone was lost recently. Luckily I had everything backed up to the cloud, and a program that allowed me to lock it remotely. If I really wanted to I could erase all the data remotely. I did change all the passwords for my email, social media and internet banking. Luckily it was found the next day so I didn't need to erase everything.

The type of security you use will depend on what is available on your device and what you find most convenient. But what is most important is that you make sure you use some form of security.

If you are using a password, make sure it is a unique, strong password.

- **Unique:** Don't use the same password for your device that you use for your accounts or applications. This makes it easier for a hacker to get into more places.
- **Strong:** Use a strong password of at least 12 characters long, with a mix of numbers, letters and symbols. You may even use a passphrase which is a string of unrelated words and may be easier for you to remember. Never use birthdates, children's names etc - ie don't use words or numbers someone else may be able to guess.

The way that you access the security settings on your device will depend on the type of device you are using.

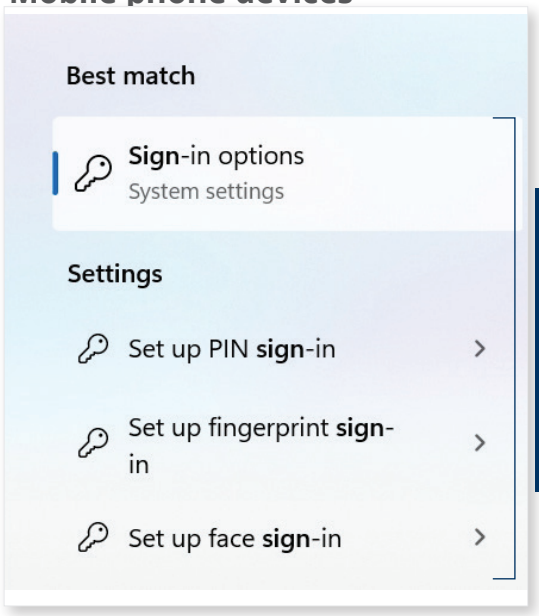

Continued on next page...

2a © Instant Education Solutions Ltd www.instant.org.nz

Windows device

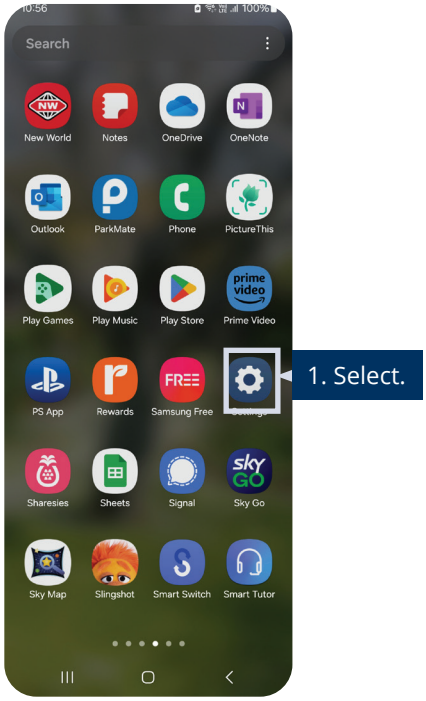

1. Press the Windows key on your keyboard and start typing 'sign-in'.

Mobile phone devices

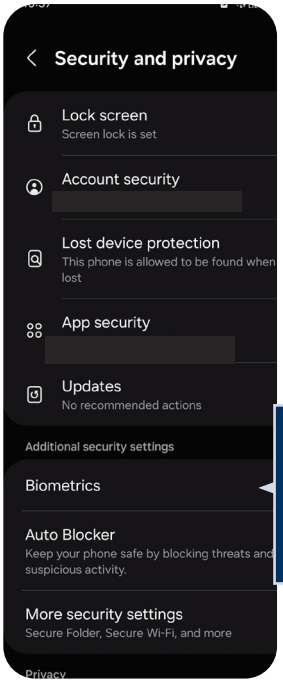

You will see different options related to sign-in. These will differ depending on which sign-in features are available on your PC. Click on the different options to investigate your sign-in options further.

Mobile operating systems eg Android and Apple, will differ, however security settings are generally found in settings.

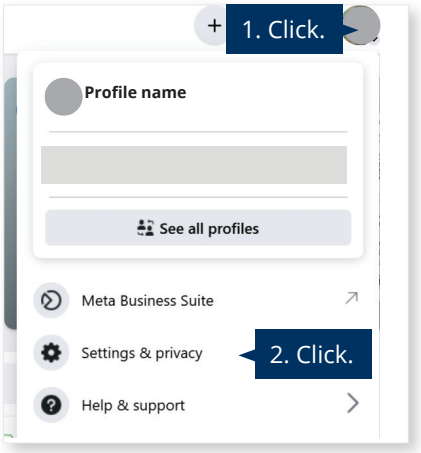

1. Select.

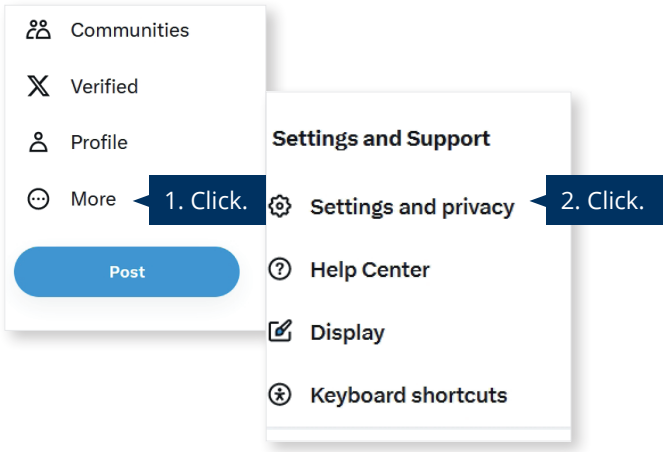

Investigate the different ways to secure your device using screen lock.

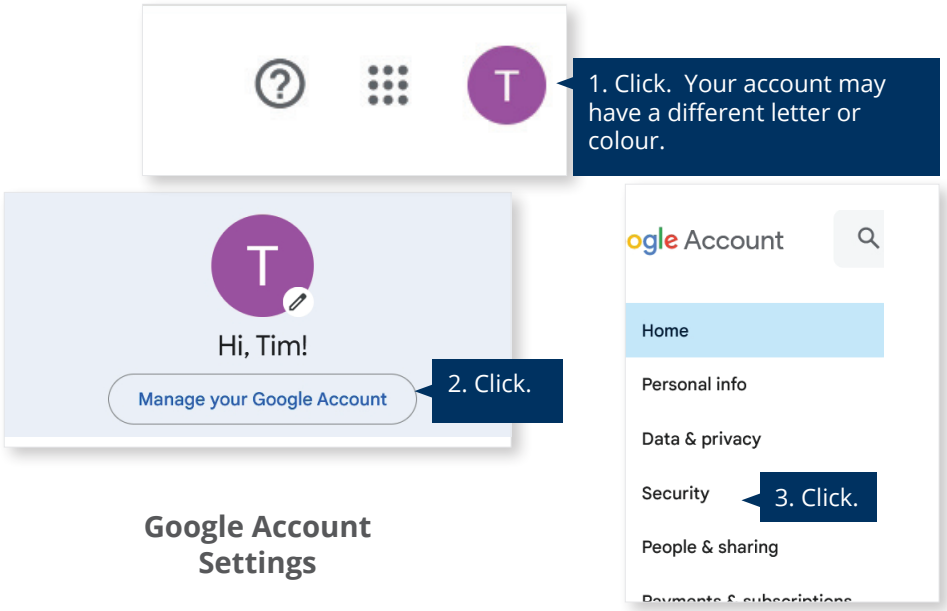

- **Secure and protect accounts.** Set strong passwords for your social network and other accounts. Also review privacy settings to make sure only those you want to view your social network site can. Make sure personal details such as your date of birth are hidden as that makes identity theft more difficult.

Facebook settings

X settings

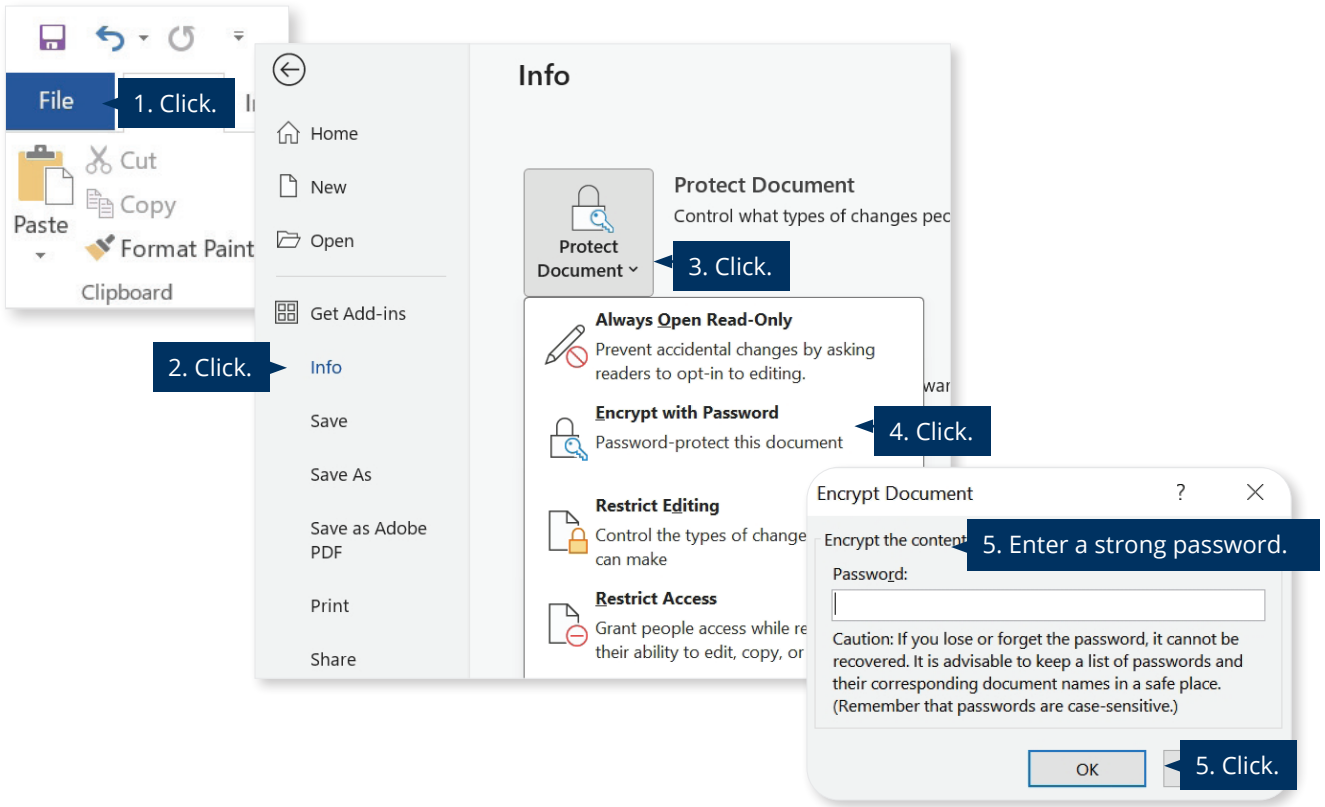

Google Account Settings

- **Protect files.** If you have a file that contains sensitive information, you can often password protect it. You could convert a document to a PDF file, where you can set a password and copy permissions in Adobe Acrobat. Files created using Microsoft Office applications can all be password protected as shown on the next page.

Continued on next page...

Licensed to Tai Poutini Polytechnic (Greymouth HO)
12102026-US29796-206823 INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

- **Do you really want that person to know that?** Be very careful about who you are communicating with and what you say, especially if you do not know that person. This is relevant for all forms of communication, especially social networking. It is good policy not to 'friend' someone you don't know. Think - why would they want to friend you if they don't know you? They may want to get access to information on your site to use for illegal purposes such as a scam or identify theft.
- **Never click on pop-up advertising links on a website.** These could take you to a site containing offensive or dangerous content.
- **Be extremely careful when downloading anything from the Internet.** Only download from trusted sources.
- **Make sure you are running anti-malware software before you search the Internet.** This will help protect you and your data when surfing the Internet.

> Identity theft is when someone steals enough personal information that they can pretend to be the person whose data they have stolen. They may then use that person's identity for activities such as accessing loans in their name.

Continued on next page...

Activity

1. What security options are available for your device? Do you use any at all? Review your device's security options. If you aren't using any, make sure you set some security. If you do, consider if it is the best option or if there are better alternatives.

   If you are not sure where to find the security and/or password options, do an Internet search or use the available help functions.

2. If you have social network accounts, review the privacy settings for them and make sure that they are strict enough.

Recognised conventions

A convention is the unwritten rule of how something is meant to be done, or the normal way something is done.

When considering conventions for using digital tools you should consider:

- the 'normal' and 'standard' way in which digital tools are used
- what is considered socially acceptable in an online situation (ie netiquette, which we have already discussed)

THE USE OF CAPITALS TO SIGNIFY SHOUTING is an example of a convention.

The conventions for using the tool depend on certain factors:

- The **purpose** of the communication. The language conventions used in a formal business communication will be a lot more formal than in a chat room. Also certain layout conventions will apply, for example bold headings in a report.
- The **target audience** or **online community**. For example, language conventions for social message between friends will follow informal conventions ie informal language, emojis, text speak (eg tku for thank you). The language convention for formal communication, such as a web conference with a client, will be more formal.

- The **context**. The organisation in which the communication is taking place will have its own conventions for online use. These may be indicated in the policies and procedures documentation, or may be unwritten rules or guidelines for the use of digital tools. The context, in a broader sense, can also refer to all of the above factors – the purpose of the communication, the target audience, and the type of digital tool/environment.

Glossary

asynchronous tool	A tool that does not allow for communication to happen at the same time (eg Internet forum).
attribution	To indicate who is the creator of an item (eg audio, image, text).
audit	Check to make sure everything is correct.
authorised	Having permission to access, use, see, etc something.
character	A computer character is a single letter, number, punctuation mark, symbol or space that can be entered into a digital device.
collaborate	Work with other people on an activity or project.
committed	Being loyal, hardworking and dedicated to something.
concise	Brief and straight to the point.
conferencing	A formal discussion between people.
confidential	Something confidential is meant to be kept secret or private.
confidentiality	Not revealing or sharing information that is meant to be kept secret or private.
convention	The generally accepted way for something to be done.
coordinate	Arrange and organise all elements needed to achieve a goal or objective in an effective way.
copyright	Rules concerning the use of original work.
cyberbullying	Using digital tools to bully other people.
defensive	When someone becomes very anxious to challenge or avoid criticism.
derived	Taken or obtained from, something.
digital device	A computing device that can receive, store, process, and/or send digital information. Examples include desktop or laptop computers, tablets, and smartphones.
digital environment	A virtual 'space' where people can communicate. Rather than a physical room, it is a virtual 'space' created using computers, that allows people to share ideas, information, and opinions.
digital tool	A device (eg computer) or software tool (eg the Facebook app or website).
discretion	Speaking and behaving in such a way that you don't reveal confidential information, or embarrass or offend someone.
dysfunctional	Not functioning or working properly.
ephemeral	Something that only lasts for a very short time.
